Python_basic_programming_11

1. Write a Python program to find words which are greater than given length k ?

In [1]:
```python
def checkLengthOfString():
    in_string = input("Enter the string: ")
    in_length = int(input('Enter the length of the string: '))
    out_string = []
    for string in in_string.split(" "):
        if len(string)>in_length:
            out_string.append(string)
    print(','.join(out_string))

checkLengthOfString()
```

```
Enter the string: My name is Rituparna
Enter the length of the string: 2
name,Rituparna
```

2. Write a Python program for removing i-th character from a string ?

In [2]:
```python
def removeCharacter():
    in_string = input("Enter the String: ")
    in_char_num = int(input("Enter the ith Character: "))
    out_string = ''
    for ele in range(len(in_string)):
        if ele != in_char_num:
            out_string = out_string+in_string[ele]
    print(out_string)
removeCharacter()
```

```
Enter the String: ineuron
Enter the ith Character: 2
inuron
```

3. Write a Python program to split and join a string ?

In [3]:
```python
def splitJoinString():
    in_string = input('Enter the string: ')
    print(f"Split String:{in_string.split(' ')}")
    print(f"Join String:{' '.join(in_string.split(' '))}")

splitJoinString()
```

```
Enter the string: Ineuron full Stack Data Science
Split String:['Ineuron', 'full', 'Stack', 'Data', 'Science']
Join String:Ineuron full Stack Data Science
```

4. Write a Python to check if a given string is binary string or not ?

In [6]:
```python
def checkBinary():
    in_string = input('Enter the string: ')
    stun = 0
    for ele in in_string:
        if ele in['0','1']:
            stun = 1
            continue
        else:
            stun = 0
            break
    statement ='is a binary string' if stun == 1 else' is not a binary string'
    print(f'{in_string}{statement}')
checkBinary()
checkBinary()
```

```
Enter the string: 101010
101010is a binary string
Enter the string: 1254
1254 is not a binary string
```

5. Write a Python program to find uncommon words from two Strings ?

In [7]:
```python
def unCommonWords():
    in_string_1 = set(input("Enter the String 1: ").split(' '))
    in_string_2 = set(input("Enter the String 2: ").split(' '))
    out_string = (in_string_1.union(in_string_2)).difference(in_string_1.
                    intersection(in_string_2))
    print(out_string)
unCommonWords()
```

```
Enter the String 1: Rituparna
Enter the String 2: De
{'Rituparna', 'De'}
```

6. Write a Python to find all duplicate characters in string ?

In [2]:
```python
def duplicateChars():
    in_string = input('Enter the string: ')
    non_duplicate_list = []
    duplicate_list = []
    for ele in in_string:
        if ele not in non_duplicate_list:
            non_duplicate_list.append(ele)
        else:
            duplicate_list.append(ele)
    print(f'Duplicate characters are :{list(set(duplicate_list))}')
duplicateChars()
```

```
Enter the string: full stack data science course
Duplicate characters are :['s', 'l', ' ', 'e', 'u', 'a', 't', 'c']
```

7. Write a Python Program to check if a string contains any special character ?

In [1]:
```python
def checkSpecialChar():
    spl_chars = '[@_!#$%^&*()<>?/\|}{~:]'
    in_num = input('Enter the string: ')
    count = 0
    char_list = []
    for ele in in_num:
        if ele in spl_chars:
            char_list.append(ele)
            count = count+1
    print(f'There are {count} Speical Characters in {in_num} which are {char_list}')
checkSpecialChar()
checkSpecialChar()
```

```
Enter the string: Data Science @ Ineuron by Sudhanshu & Krish & Sunny
There are 3 Speical Characters in Data Science @ Ineuron by Sudhanshu & Krish & Sunny
which are ['@', '&', '&']
Enter the string: Family
There are 0 Speical Characters in Family which are []
```
